

JAX-RS no Eclipse

1. File > New > Dynamic Web Project

- Target Runtime → Apache Tomcat 9

- Dynamic Web Module Version → 4.0

~~* HARBAR generate web.xml deployment descriptor~~

2. Botão Direito no Projeto

- Select Java EE Tools

- click on: Generate Deployment Descriptor stub

↳ Isto cria o web.xml sob o Folder
/webContent/WEB-INF/.

3. Converter o projeto p/ Maven

- Botão direito no projeto

- clique on: CONFIGURE

- Select option: Convert to Maven Project

4. Abrir Pom.XML e adicionar as dependências:

~~- asm 3.3.1~~

~~- Jersey-bundle 1.19~~

~~- json 20140107~~

~~- Jersey-server~~

~~- Jersey-core~~

} Jersey-container-servlet
2.33

} Jersey-hk2
2.33

5. Atualizar

web.xml

→ incluir servlet do Jersey
